 - A 2% evening period increase on the previous comparable period (Dec 07 – May 08);
 - A 7% daytime period increase on the previous comparable period (Dec 07 – May 08); and
 - A 4.5% increase overall on the previous comparable period (Dec 07 – May 08).
- VAP figures across Southwark for the most recent 12-month period (Jun 08 – May 09) show:
 - A constant evening period position maintained with the previous comparable period (Jun 07 – May 08);
 - An 11% daytime period increase on the previous comparable period (Jun 07 – May 08); and
 - A 6% increase overall on the previous comparable period (Jun 07 – May 08).

Alcohol related CAD data

4. Specific comparative information is provided within the report for each of the areas under consideration. General comparative information across the Southwark area is not available; however, the analyst's report does state that "this type of disorder has dramatically fallen in recent months". Again, information provided within the analysis covers the full 24-hour period.
