1. Child obesity – National Childhood Measurement Programme Yr R				
Definition	Obesity Prevalence: % of children in reception or Year 6 whose weight is above the 95 th centile of the population Excess Weight Prevalence: % of children in reception or Year 6 whose weight is above the 85 th centile of the population		How this indicator works	Reception and Year 6 pupils have their height and weight measured to inform local planning and delivery of services for children and to provide population level surveillance data to analyse trends in growth patterns and obesity. The NCMP is an important source of data to support national and local work to address child hood obesity.
What good looks like	<u>Reception Year Children</u> <ul style="list-style-type: none"> • Reduce the obesity prevalence to 11.3% by 2019/20 • Reduce the excess weight prevalence to 23.6% by 2019/20 		Why this indicator is important	Southwark has some of the highest rates of overweight and obesity in the country, with 56% of adults and 42% of children (year 6) classified as obese or overweight. Our most vulnerable populations are at increased risk of becoming overweight and obese.
History with this indicator	Obesity prevalence (2015/16) <ul style="list-style-type: none"> • Reception: 12.2% 	Excess Weight prevalence (2015/16) <ul style="list-style-type: none"> • Reception: 25.2%

*Projected figures

Historical Smoking Prevalence for Routine and Manual Occupations (2010 – 2015) and Projected Prevalence (2016 - 2019) for Southwark, London and England

Performance Overview		RAG rating	AMBER
Benchmarking	London Smoking prevalence – adults (2015): 16.3% London Smoking prevalence - adults – routine and manual (2015): 24.2%		
Actions to sustain or improve performance		By when	Partner agency
Tobacco Control Review		Completed	Southwark Council and Southwark CCG
New tobacco control strategy developed and agreed		Completed - October 2016	Southwark Council
Regulation of tobacco sales including test purchasing for under age sales		Ongoing	Southwark Council
Monitoring of compliance with plain packaging legislation (to be compliant from May)		May 2018	Southwark Council
Review and update training and referral mechanisms for pregnant smokers.		July 2017	Southwark Council, KCH and GSTT
Re-commission stop smoking service to provide targeted support to identified key groups.		July 2017	Southwark Council and Southwark CCG

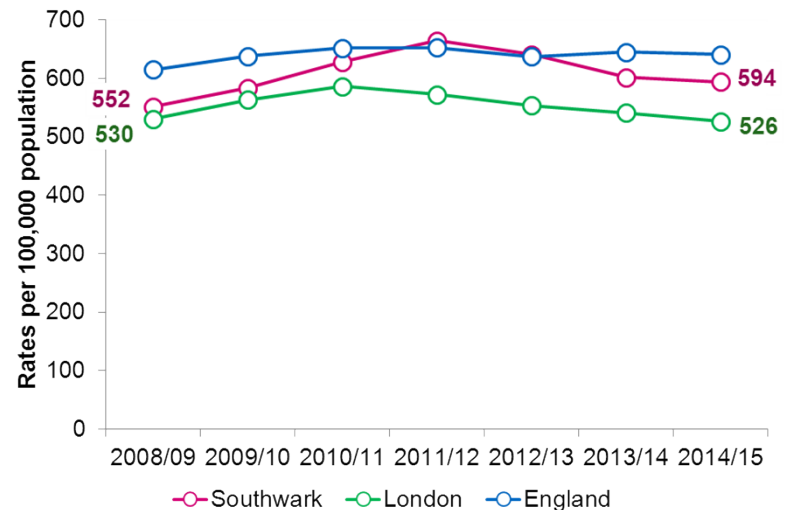

3. Alcohol

Definition	Admission episodes for alcohol-related conditions (narrow definition); directly standardised admission rate per 100,000 population. <i>Data source: Public Health England from NHS Digital and Office of National Statistics for period 2014/15; last updated September 2016.</i>	How this indicator works	This indicator comprises the estimated number of admissions among Southwark’s population that can be attributed to alcohol, and is calculated on the basis of actual hospital admission data.
What good looks like	Statistically lower than London average. <i>London as a comparator is a more stretching target than England as mean alcohol consumption per head is lower in London than nationally. Moreover, Southwark is an inner London borough and call-outs are generally higher within inner-London boroughs.</i>	Why this indicator is important	This metric quantifies the impact of alcohol across a number of different conditions.
History with this indicator	At present we are developing a system that will enable quarterly reporting with lag of 9 months; this is expected to go-live once the information governance compliance and IT infrastructure have been implemented (expected winter 2016/17).		

Admission episodes for alcohol-related conditions (Narrow definition)

Rate of admissions per 100,000 population

Period	2008/09	2009/10	2010/11	2011/12
Southwark	551.7	583.5	628.4	664.6
London	530.4	563.0	586.6	572.0
England	614.6	638.1	651.9	652.8
Period	2012/13	2013/14	2014/15	2015/16
Southwark	640.7	601.4	593.8	
London	553.8	541.2	526.2	
England	636.9	645.1	640.8	

Performance Overview	Southwark has a downward trend (since 2011/12). Although, the Southwark rate is higher than London, the gap is narrowing. The rate is statistically lower than the national average.	RAG rating	AMBER
Actions to sustain or improve performance		By when	Partner agency
Increase commitment and resource to Identification and Brief Advice (IBA) through general practice or broader 'Make Every Contact Count' (MECC) work in hospitals and elsewhere; introduced into Southwark CCG's commissioning intentions for primary care in September 2016.		On-going	CCG and Acute Trusts
On-going active involvement and leadership in licensing and other regulatory activity. <i>Evaluation of Southwark's cumulative impact policy completed and reported, Winter 2016.</i>		On-going	Southwark Council and partner Responsible Authorities including Metropolitan Police
Refresh alcohol strategy into alcohol action plan; process agreed at Southwark Alcohol Summit in July 2016. First draft action plan is complete and awaiting sign off.		April 2017	Southwark Council, CCG and partners
Southwark's bid to participate in the Home Office's Local Alcohol Action Areas program was successful. The project will assess and optimise the value of assault data collected by emergency departments (EDs) with a view to reduce alcohol related crime, disorder and harms.		End of 2018	Southwark Council and Acute Trusts
Conduct a brief alcohol health needs assessment (HNA); this will form part of the Joint Strategic Needs Assessment (JSNA). <i>Completed.</i>		February 2017	Southwark council DAAT

Health and Wellbeing Board		May 2017	
3. Drugs			
Definition	Proportion of successful completions of treatment for i. opiate clients and ii. non-opiate clients <u>and</u> who do not go on to re-present to services within 6 months. <i>Data source: Public Health England, for period 2014 last updated September 2016.</i>	How this indicator works	This indicator tracks the proportion of clients who complete the drug treatment programme for different classes of drug misuse. It is a measure of the retention of clients in the programme, with the assumption that as more people complete treatment, fewer will go on to have continued drug dependency or relapse. It is used nationally as a quality indicator for drug treatment services.
What good looks like	Achieving comparable levels of treatment with London (giving amber), leading to placement in the top quartile of national performance (giving green).	Why this indicator is important	This indicator assesses the outcomes of the drug treatment service commissioned by Southwark Council. It is however focused on those at the more severe end of the spectrum – typically already dependent.
History with this indicator	While this indicator is provided in a restricted format by Public Health England on a quarterly basis, the statistics are only available publically on an annual basis, and with an approximate 12 month lag. Public health and the drugs and alcohol commissioning team have discussed what alternatives, but have concluded that the nationally available data are the most robust data presently available for a public reporting. A new provider began operating on 4 January 2016.		
	<p>Successful completions of treatment for:</p> <p>Opiate Users 6.8% N=70; difference is not statistically significant to London. Target for top quartile $\geq 7.6\%^*$ Non-opiate Users 32.0% N=140; difference is not statistically significant to London. Target for top quartile $\geq 44.5\%^*$</p> <p><i>Top quartile target for completion statistics apply to current performance.</i> <i>Latest Period: Completion period: 01/07/2015 to 30/09/2016, Re-presentations up to: 31/12/2016</i></p>		
Performance Overview	Not applicable at this time.	RAG rating	AMBER
Benchmarking	Benchmarked against comparator boroughs.		

Actions to sustain or improve performance	By when	Partner agency
Public health is undertaking a deeper dive into substance misuse and will attempt to gain a clearer insight into the breadth of substance misuse issues in Southwark. This work will lead to a better understanding of the epidemiology of misuse locally and inform service development for the future; this work will likely affect the non-opiate outcomes more than opiate users.	June 2017	Southwark Council DAAT and Southwark CCG
The DAAT (commissioning) service meets regularly with the provider to monitor and improve services; Southwark public health with DAAT have proposed a budget for 2017/18 with appropriate mitigation and safeguards for service continuation in the context of financial pressures.	On-going	Southwark Council DAAT
A Drug Related Death (DRD), panel has been assembled and will meet every quarter to discuss deaths due to substance misuse in the borough	First panel meeting January 2017, then ongoing	Southwark Council DAAT, Lifeline

Health and Wellbeing Board

4. Reduce the numbers of people contracting HIV and other sexually transmitted infections

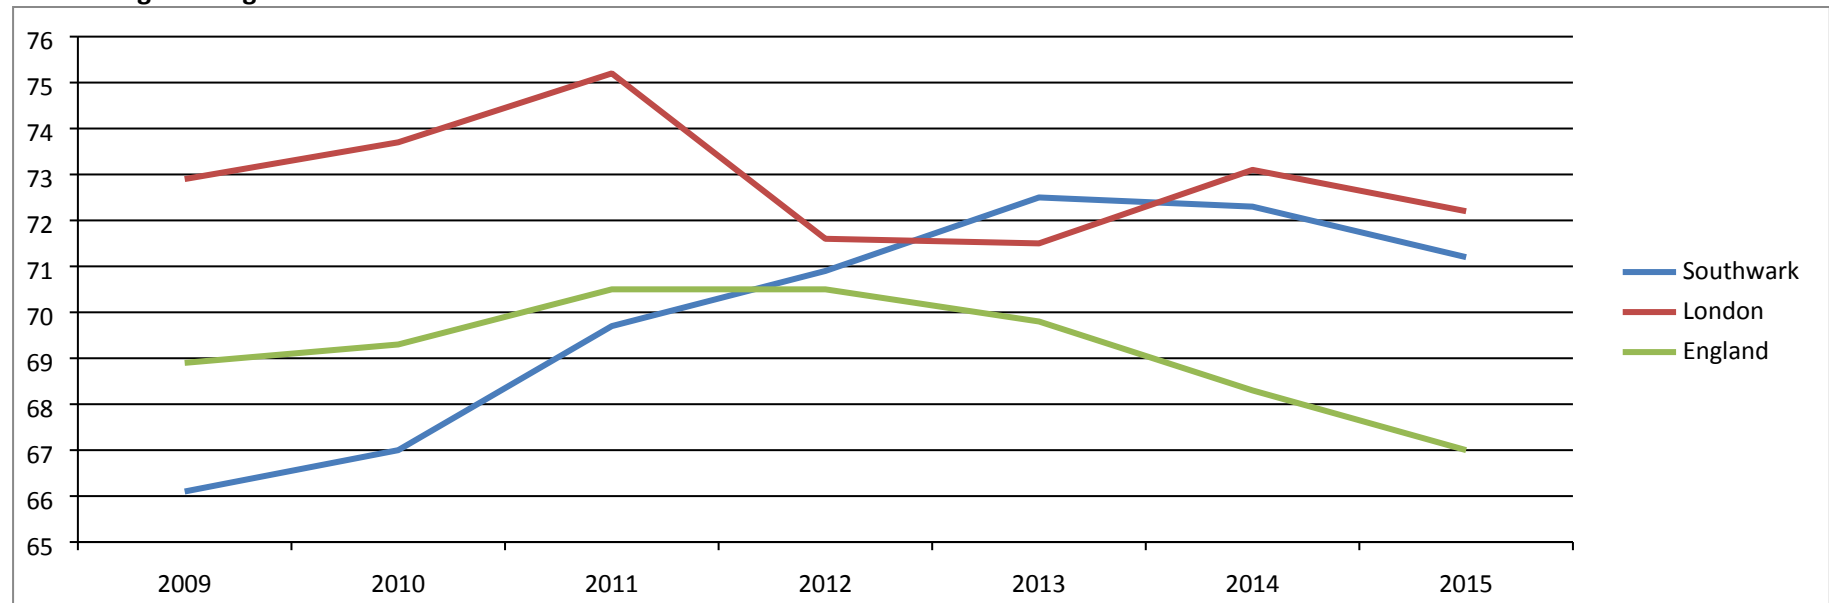

May 2017

Definition	Proportion of eligible people who access a sexual health testing service (clinic or online) who have an HIV test.	How this indicator works	The number of eligible new GUM episodes plus online contacts where a HIV test was accepted as a proportion of those where a HIV test was offered.
What good looks like	At least 77.5% of people eligible for an HIV test are tested when they access sexual health services.	Why this indicator is important	HIV testing is integral to the treatment and management of HIV. Knowledge of HIV status increases survival rates, improves quality of life and reduces the risk of transmission.
History with this indicator	76.7 of Southwark clinic residents who access a clinic have an HIV test		

	2015/16 Target	2015 Data	2016/17 Target	2016 Data
Proportion of eligible GUM patients who accepted an HIV test	76.5%	71.2%	77.5%	Released in October 2017

The proportion of people who accepted an HIV test is 71.2% against a target of 76.5%. Southwark performs similar to London and better than England.

HIV Testing Coverage 2009-15

	2015/16 Target	2016/17 Target	Q1 2016/17	Q2 2016/17	Q3 2016/17	Q4 2016/17
Proportion of eligible SH24 service users who have returned an HIV test	76.5%	77.5%	80.7%	85.5%	85.3%	86.6%
Proportion of SH24 service users who have not been to an STI clinic previously	Monitor over time to get a baseline		18.6%	19.5%	18.3%	20.3%
Total number of tests returned by SH24 service users (individual tests - Chlamydia, Gonorrhoea, Syphilis & HIV)	N/A	N/A	13336	20807	12232	13831
<p>SH24 is a new Southwark and Lambeth service which provides free and confidential sexual health service online which can be accessed 24 hours a day. Data reported is for Southwark and Lambeth residents. SH24 is working with Kings College Hospital and Guys and St Thomas' Hospital to move more asymptomatic testing out of clinics and on-line.</p> <p>Southwark and Lambeth will be joining a new pan-London e-service in October 2017, which will replace the local service and provide better value for money. The procurement is currently underway, and the provider will be announced in May 2017.</p>						

Performance Overview	Coverage of HIV testing measured in genitourinary medicine (GUM)	RAG rating	AMBER
Benchmarking	London (GUM services only) 72.2%		
Actions to sustain or improve performance		By when	Partner agency
Focused prevention and HIV testing awareness amongst black African groups through the new RISE partnership, and working closely with the Pan-London HIV Prevention Programme.		Ongoing	RISE Partnership
Increase HIV testing amongst eligible groups by examining inequalities in test return rates and seeking to change these via a behavioural insights project with LGA and Behavioural Insights Team.		March 2018	SH:24, Local Government Agency, Behavioural Insights Team

4. Sustain the reduction in teenage pregnancy

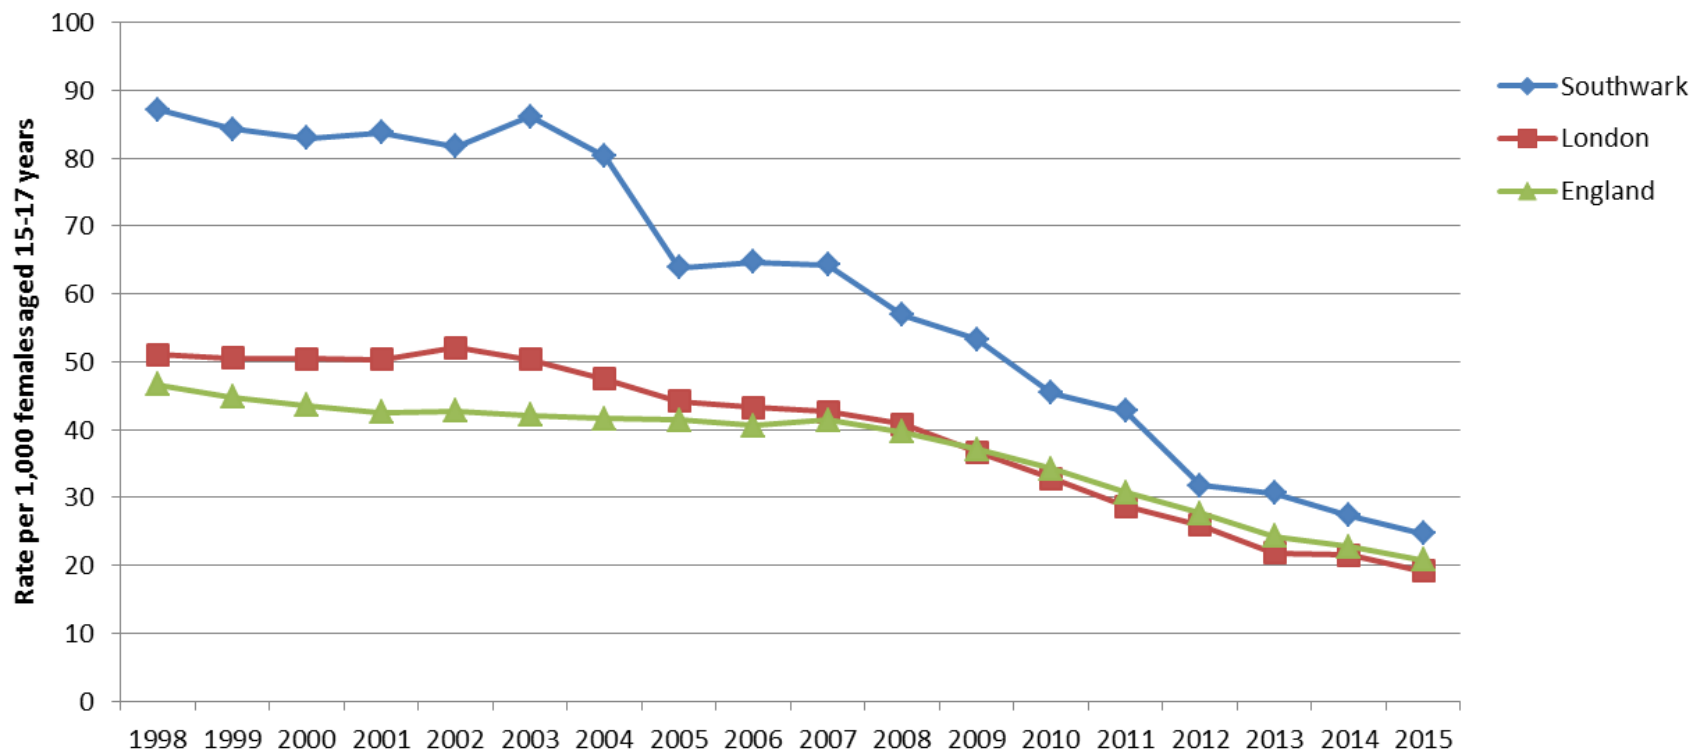

Definition	Under 18 conception rate (reduction trend).	How this indicator works	This indicator shows number of conceptions to women aged 15-17 per 100 women of that age.
What good looks like	No yearly increase in the conception rate amongst women aged 15-17.	Why this indicator is important	Teenage pregnancy is associated with poorer outcomes for young parents and their children. Teenage mothers are less likely to finish their education, are more likely to bring up their child alone and in poverty and have a higher risk of poor mental health than older mothers. Infant mortality rates for babies born to teenage mothers are around 60% higher than for babies born to older mothers. The children of teenage mothers have an increased risk of living in poverty and poor quality housing and are more likely to have accidents and behavioural problems.
History with this indicator	Southwark now has the third greatest reduction in teenage conceptions within London. We want to sustain this trend.		

The latest rate is for the 12 months ending 31 December 2015. For this period, Southwark's rate was 24.2 conceptions per 1,000 young women aged 15-17 years. This another year of data showing teenage pregnancy rates lower than the last;

Whilst we rely on rates to show a reducing trend in teenage conception, the actual number of conceptions has also declined. The provisional figures show a continuous downward trend: in Southwark there were 101 pregnancies in 2015 compared to 110 in 2014, and 318 in 1998.

The 1998 to 2015 trend is shown below. Southwark remains slightly above the national and London rates, however, the gap has become considerably smaller as we maintain the continual reduction in teenage conception since 1998.

Rate of under-18 conception

Performance Overview		RAG rating	GREEN
Benchmarking	London		
Actions to sustain or improve performance		By when	Partner agency
Review school-based health provision to ensure young people are receiving services appropriate to need.		September 2017	Education, Schools
Condom scheme – increase the number of venues distributing condoms and health promotion contacts with young people		March 2018	Brook
Contraception – increase the number of young women choosing long acting methods of contraception.		March 2018	Brook, GSTT, Kings, SH24, Primary Care and Pharmacy
