

APPENDIX 2

Online Engagement - Initial Findings

This report sets out the initial findings from the online engagement portal. It presents a snapshot of the findings but not a full analysis of the views that people have shared with us about climate change.

The demographic data also shows that those using the portal are not reflective of the community as a whole in Southwark. While the views and ideas that residents have given through the portal are valuable, it is important to note that this is just one way in which the council will engage with residents about climate change. Paragraphs 26-30 of the report note our overall approach and commitment to an inclusive process.
